For immediate release

ENENSYS Technologies celebrates its 10th birthday!

Established in 2004, ENENSYS Technologies this week celebrates its 10th birthday. Within a decade, the company has grown from a DIY startup to a high-performance company, recognized internationally with many of the world's largest broadcast operators among its customer base.

" 10 years already! Time flies ... "said Régis LE ROUX, CEO of ENENSYS. "In 10 years, we have seen it all: the creation, acceleration, difficulties and repositioning into new markets. These 10 years have not been a bed of roses indeed, and we went through moments of doubt, but each time we were able to move forward. And thanks to teamwork, ENENSYS has successfully established itself as a leader in the new broadcasting technologies such as DVB-T2.

Asked about his vision for the next 10 years, Régis LE ROUX concludes: *" You can't change your DNA: our future will be made of innovation and international development! "*

In the last 4 years, ENENSYS has delivered outstanding performance. To take the time to celebrate its 10th birthday, and to thank those who have contributed to its success, the company will invite its partners and friends to join the team for a celebratory drink on the sidelines of the first edition of "Allez les Verts" festival on Thursday 22nd May at UBU club in Rennes.

About ENENSYS Technologies:

ENENSYS Technologies has many years of experience in the design and manufacturing of Digital TV transmission systems.
